List of Videos	xix
Preface	xxi
Acknowledgments	xxiv
About the Authors	xxvii

CHAPTER ONE. INTRODUCTION: WHY YOU NEED TO TEACH STUDENTS TO MATHEMATIZE **1**

Problem-Solving Strategies Gone Wrong	2
What Is Mathematizing? Why Is It Important?	3
Focusing on Operation Sense	4
Using Mathematical Representations	4
Teaching Students to Mathematize	6
Building Your Understanding of the Operations and Related Problem Situations	7
Playing in the Mathematizing Sandbox: A Problem-Solving Model	10
Leveraging the Power of Children's Literature	11
Final Words Before You Dive In	12

CHAPTER TWO. MOVING FROM COUNTING TO ADDITION AND SUBTRACTION **14**

Thinking About Counting, Addition, and Subtraction	14
Sandbox Notes: Explore Your Thinking	16
Students and Teachers Think About the Problem	18
The Development of Counting	19
Counting or Add-To?	21
Representing Problem Situations or Representing Answers?	23
Using Children's Literature to Explore Add-To and Take-From Situations	26
Transcribe the Action or Relationship	26
Moving Beyond 20	27
Students and Teachers Think About the Problems	29
Representing Problem Situations Multiple Ways	29
Translating the Five Representations: Try It Out	32
Teaching Students to Use Concrete and Pictorial Models	34
Key Ideas	36
Try It Out!	37
Reflect	39

CHAPTER THREE. ADD-TO PROBLEMS: LOCATING THE CHANGE **40**

Thinking About Active Addition Situations	40
Sandbox Notes: Explore Your Thinking	42
Students and Teachers Think About the Problems	44
Finding the Unknown: Three Story Structures	48
Story Structures: Implications for Teaching	49
Modeling the Active Problem Situation	50
Using Children’s Literature to Explore Add-To Situations	55
Make Predictions	55
Transcribe the Action or Relationship	56
Digging Deeper Into Start Unknown Situations	57
Complicating Things: The Start Unknown Variation	58
Strategies for Making Sense of Start Unknown Problem Situations	60
Separating Computations From Operations	62
Moving to Equations	64
Key Ideas	66
Try It Out!	67
Reflect	68

CHAPTER FOUR. TAKE-FROM PROBLEMS: LOCATING THE CHANGE **70**

Thinking About Active Subtraction Situations	70
Sandbox Notes: Explore Your Thinking	72
Students and Teachers Think About the Problems	74
Finding the Unknown: Three Story Structures	75
Story Structures: Implications for Teaching	75
Modeling the Active Problem Situation	78
Digging Deeper Into the Start and Change Unknown Situations	81
Moving From Concrete to Symbolic Representations	83
Using Children’s Literature to Explore Take-From Situations	89
Create Another Outcome	89
Find the Unknown Quantity	89
Key Ideas	90
Try It Out!	91
Reflect	92

CHAPTER FIVE. PART-PART-WHOLE: UNDERSTANDING THE RELATIONSHIP **94**

Thinking About Part-Part-Whole Situations	94
Sandbox Notes: Explore Your Thinking	96
Students and Teachers Think About the Problems	98
Defining the Part-Part-Whole Situation	99
Modeling Relationships Versus Action	100
Moving From Counters to Bar Models	101
The Special Case of Both Addends Unknown	105
A Note About the Commutative Property	106
Using Children’s Literature to Explore Part-Part-Whole Situations	107
Make Predictions	107

Moving Beyond 20	108
Students and Teachers Think About the Problems	109
Modeling Measurement Problems	110
Writing Equations: Addition or Subtraction	111
Finding the Equation in the Model	113
Key Ideas	116
Try It Out!	117
Reflect	118
CHAPTER SIX. ADDITIVE COMPARISONS: ANOTHER KIND OF RELATIONSHIP	120
Thinking About Additive Comparison Situations	120
Sandbox Notes: Explore Your Thinking	122
Students and Teachers Think About the Problems	124
Early Years Comparisons	125
Additive Comparison Situations	126
Building Models for Comparisons	128
Students and Teachers Think About the Problems	129
Making Use of Models for Thinking	130
The Language of Comparison Problems	132
Language Can Get Tricky	135
Building Bar Models for Comparisons	137
From Counters to Bar Models	138
Problem Posing as an Instructional Strategy	139
Using Children’s Literature to Explore Additive Comparison Situations	140
Create Another Outcome	140
Key Ideas	141
Try It Out!	142
Reflect	144
CHAPTER SEVEN. EARLY MULTIPLICATION AND DIVISION: PATTERNS AND PREDICTIONS	146
Thinking About Early Multiplicative Thinking	146
Sandbox Notes: Explore Your Thinking	148
Students and Teachers Think About the Problem	150
Modeling Even and Odd Numbers	151
Equal Groups Problem Situation	152
Using Patterns to Identify Even and Odd Numbers	153
Using Children’s Literature to Explore Early Multiplication	154
Transcribe the Action or Relationship	155
Bringing in Another Dimension With Arrays	155
Recognizing Area/Array as a Problem Situation	158
Building an Understanding of Arrays as Structures	158
Using Children’s Literature to Explore Area and Array Situations	159
Transcribe the Action or Relationship	160
Setting the Stage for Division	160
Equipartitioning	163
Two Models of Division	166

Using Children’s Literature to Explore Early Multiplication and Division	167
Transcribe the Action or Relationship	167
A Final Word on Introducing Early Multiplication and Division	168
Key Ideas	168
Try It Out!	169
Reflect	171
CHAPTER EIGHT. CHANGING HOW YOU TEACH WORD PROBLEMS	173
Getting Into the Mathematizing Sandbox	173
Eight Shifts in Instruction for Building Students’ Problem-Solving Skills	175
Do Word Problems for Sense-Making	175
Treat Context and Computation Separately	176
Create More and Varied Representations	176
Explore All the Work Operations Can Do	177
Add Operation Sense Routines to the School Day	178
Offer Students Experiences With a Variety of Problem Situations	178
Listen to Students and Be Curious	179
Make Time for Mathematizing in the Sandbox	179
Guidance for Moving Forward: FAQs	180
Finding Unexpected Mathematics in Stories	183
Play With Quantities	183
Appendix: Situation Tables	185
References	188
Index	191

List of Videos

Video 2.1 – Cleaning Up Crayons With an Answer	18
Video 2.2 – Cleaning Up Crayons With a Counting-On Strategy	18
Video 2.3 – Valentine’s Cards With Base 10 Blocks	31
Video 3.1 – Soccer Players With a Picture	45
Video 3.2 – Cookies With a Picture and Bar Model	45
Video 3.3 – Flowers With Literal Sketches	52
Video 3.4 – Flowers With Abstract Sketches	52
Video 3.5 – Class Library With Base 10 Blocks	59
Video 3.6 – Class Library With Place Value Chips	59
Video 3.7 – Simpler Class Library With Counters and a Bar Model	61
Video 3.8 – Simpler Class Library With a Number Line	61
Video 3.9 – Fun Run With a Number Line	63
Video 3.10 – Fun Run With Counters	63
Video 4.1 – Losing Cars With a 10 Frame	74
Video 4.2 – Spending Money With Play Money	74
Video 4.3 – Giving Away Pennies With a 10 Frame	79
Video 4.4 – Eating Apples With Cubes	79
Video 4.5 – Tangerines With a 100 Board	82
Video 4.6 – Class Field Trip With a Number Line	82
Video 5.1 – Soccer Practice With Unit Counters	98
Video 5.2 – Soccer Shoes With Drawn Circles	98
Video 5.3 – Favorite Ice Cream With Counters	102
Video 5.4 – Favorite Ice Cream With a Bar Model	102
Video 5.5 – Tulip Height With a Number Line	109
Video 5.6 – Notebook Height With a Sketch	109
Video 6.1 – Spilling Counters Combinations of 10	124
Video 6.2 – Spilling Counters Comparisons	124
Video 6.3 – Paper Airplane Flights With Counters	129

Mathematize It!

Video 6.4 – Paper Airplane Flights With Tally Marks	129
Video 6.5 – Baseball Cards With Base 10 Blocks	134
Video 6.6 – Animal Shelter With a Number Line	134
Video 7.1 – Even Number of Students With Counters	150
Video 7.2 – Even Number of Students With Connecting Cubes	150
Video 7.3 – Creating a Rectangle With Color Tiles	157
Video 7.4 – Creating a Rectangle With a Gap in the Center	157
Video 7.5 – Distributing Tickets in Groups of Three	162
Video 7.6 – Creating Three Groups of Students	162
Video 7.7 – Sharing Pennies With Groups	165
Video 7.8 – Sharing Pennies in an Array	165
